

Olive Software Announces Partnership with Spectrum Information Services

SANTA CLARA, California, February 1, 2007 - Today, Olive Software announced a partnership with Spectrum Information Services. Olive Software is a global leader in ePublishing, structured web content management, and archiving technologies. Spectrum will use Olive ViewPoint, which provides browser-based access to any document with no additional client-side software, to add a scalable information server to Spectrum's extensive suite of document-centric services.

The joint solution will enable Spectrum customers to transform their critical business documents into a searchable information server. They will be able to take their unstructured documents from virtually any format, including paper, microfilm or electronic, and make them available online in a universal XML-based format. The main advantage of this approach is that customers can continue to view their documents in the original format, and because the information is in XML, they can repurpose that information to other applications, systems or devices throughout their IT environment. Also, with XML-based intelligent searches, the results yielded are far more targeted and useful.

"Olive greatly extends the range of services we can offer our customers," commented Curtis Pilon, President and CEO of Spectrum Information Services. "Olive's XML-based approach furthers our mission of providing seamless integration of new and legacy documents across the enterprise."

"We are very excited about our new partnership with Spectrum," commented Yuval Rachmilevitz, President and CEO of Olive Software. "Extending the already wide range of document management services will provide their customers more sophisticated ways to use their data to improve their business performance."

Both companies are looking forward to providing a comprehensive document management solution that revolutionizes the way data mining and information culling are conducted across the enterprise.

About Spectrum Information Services:

Spectrum Information Services (www.spectruminformation.com) is a leader in document management solutions. Since 1990 we have been converting paper records into digital format accurately and on time using a clearly defined and controlled process to give our clients instant access to business critical documents from anywhere at any time. This allows our clients more time to focus on their core business processes and less time and resources on document management and retrieval.

About Olive Software:

Olive Software (www.olivesoftware.com) enables its customers to transform their content resources into intelligent knowledge assets, enabling information discovery, effective search and future-proof preservation. Hundreds of companies and millions of end-users rely on Olive to unlock the information in their content and publish it through a

browser, customized web application or portal, or knowledge management application. Olive's end-to-end electronic publishing platform understands the structure and semantics of electronic, paper, microfilm, and microfiche documents and automatically converts them to XML with highly searchable metadata. Olive Software is based in Santa Clara, California, with sales offices in New York, Washington DC, Denver, and Los Angeles, and R&D facilities in Israel.
